

Oil Supply Set Flexible

Part # :
IW-100102 IW-100111
(for Knovelhead) (for Shovelhead)

Dear Customer,
we'll thank you proudly for the purchase of this fine product and therefor the confidence in performance and quality.

Because this oil supply pipe set exists in three different versions and can be assembled variable, here some last hints :

- 1.) The oil pipes are only pre-mounted loosely for a better variable later use.
- 2.) Only screw the oil pipes with the stand-firm screw thread end into the divider cage.
- 3.) Screw the three oil pipes in a convenient position in relation to the carburator-box into the divider cage.
- 4.) Place the three left ends of the oil pipes with free turning threads into the related counterpieces in the rockerboxes and/or the engine block/cylinder (ev. use teflon tape).

For the Shovelhead variant a blind screw is enclosed in addition with which the back superfluous oil drilling is sealed up.
